Grinder

Grinder, zu Deutsch Mahlwerk, ist der in den USA geprägte Begriff für Mühlen zur Zerkleinerung von Hanfprodukten wie Haschisch oder Marihuana. Erstmals tauchten sie in Deutschland in den 90er Jahren auf. Die erste mir bekannte Mühle war der zweiteilige Holzgrinder mit eingebauten Stiften der Marke Sweatleaf. Grinders werden aus den unterschiedlichsten Materialien hergestellt wie z.B.: Aluminium, Edelstahl, Acryl, Holz und Speckstein. Es gibt sie in den verschiedensten Ausführungen wie 2-, 4- oder mehrteilig, mit Kurbel, elektrisch oder mit Federzug. Zur extra Gewinnung von Pollenmaterial aus Marihuana haben mehrteilige Grinders Siebe eingebaut, manche sogar auch mit unterschiedlichen Maschenweiten. Bei verschiedenen Siebstärken in einem Grinder entstehen unterschiedliche Pollenqualitäten: Je feiner das Sieb, desto potenter der Pollen. Auch durch die Anordnung und die Form der Zähne unterscheiden sich die Mühlen. Je nach Anzahl und Form der Mahlzähne wird das Material gröber oder feiner zerkleinert. Grinders mit Stiften werden zur Zerkleinerung von Marihuana und Grinders mit Zähnen zur Zerkleinerung von Haschisch (hart, nicht ölig) und Marihuana verwendet.

Ein wichtiger Punkt bei den Grindern ist das Material, aus dem die Mühlen hergestellt sind. Es gibt heftige Diskussionen darüber, ob der Abrieb der Grinders in der Rauchmischung gesundheitsgefährdend ist. Es ist sicher, dass ein Grinder aus hartem Material weniger Abrieb hat, als einer, der aus weichem Material gefertigt wurde. Die Farben werden elektrolytisch aufgetragen und härten das Aluminium zusätzlich. Da die Farben gesundheitlich nicht unbedenklich sind, gibt es auch Grinders die nur äußerlich farblich eloxiert sind, im Mahlwerk dagegen nur materialfarben sind. Vorzuziehen sind aus meiner Sicht Grinders aus Holz oder Metallen mit gehärtetem Überzug (hard anodized), sowie solche aus Edelstahl.

Bei der neuesten Generation mehrteiliger Grinders lassen sich auch die unter den Zähnen befindlichen Lochscheiben, durch die das Material nach dem Zerkleinern fällt, auswechseln. Das ermöglicht es, genau den richtigen Grad an Zerkleinerung zu bestimmen, den man für die verschiedenen Genussmethoden braucht, z.B. gröberes Gras zum Drehen von Joints, feiner gemahlenes zum Vaporisieren.

Haschisch lässt sich in den meisten Mühlen mit Zähnen ebenfalls zerkleinern. Dafür sollte es möglichst kalt und nicht zu ölig (schmierig) sein. Am besten wird es im Kühlschrank aufbewahrt. Wer seine Rauchmischung mit Tabak anreichert, kann diesen auch sofort mit in den Grinder geben und alles zusammen vermahlen. Diese Mischung ist besser durchmischt als mit der Handmethode und brennt sauberer ab. Alle Mühlen, die nicht aus Holz sind, lassen sich mit alkoholhaltigen Reinigern oder speziellen Grinder-Reinigern einfach säubern. Restrückstände können rausgekratzt oder mit harten Borsten einer Bürste entfernt werden. Holzmühlen werden einfach nur ausgekratzt.

Grinders

Grinder is the term shaped in the USA for querns for mincing hemp products like hashish and marihuana. Initially, they appeared in Germany during the 90s. The first grinder I got aware of was the two-part wooden grinder with integrated pins of the brand Sweatleaf. The grinders are made of the most diverse materials like for example aluminium, stainless steel, acrylic, wood or soapstone. They come in 2-, 4- or more parts, with crank, spring balancer or electrically driven. For the extraction of pollen from marihuana, multipart grinders have integrated screens, some even come with different mesh widths. Different mesh widths make for different quality of pollen: the finer the screen, the more potent the pollen. Grinders also vary respective arrangement and form of the teeth. Depending on number and form of the teeth, the material is minced more fine or coarse. Grinders with pins are taken for shredding marihuana and grinders with teeth for shredding hashish (hard, not oily) and marihuana.

An important point is the material grinders are made of. There are fervid discussions if the abrasion of the grinder in the smoking mixture is a health risk. It is sure that a grinder made of hard material has less abrasion than one made of soft material. The colours are applied electrolytically and harden the aluminium additionally. Since the colours are not harmless, there are grinders which are anodized only outside while the grinding chamber stays uncoloured. In my opinion, grinders made of wood or metal with hardened coating (hard-anodized) as well as of stainless steel are to be preferred.

The latest generation of multipart grinders has replaceable punched discs underneath the grinding teeth through which the material falls after shredding. This enables to find just the right degree of shredding needed for the various indulging methods, for example coarse grass for joints, fine grass for vaporization.

Hashish can also be minced in most grinders with teeth. For this purpose, it should be as cold as possible and not too oily (greasy). It is best stored in the refrigerator. Those who enrich their smoking mixture with tobacco can add the tobacco at once to the grinder and grind together. The mixture is better mixed than when stirred by hand and burns down more smoothly.

All grinders which are not made of wood can easily be cleaned with alcohol-containing cleaners or special grinder cleaners. Remains can be removed with a scraper or with the hard bristles of a brush. Wooden grinders are simply scraped out.

Grinder

Il termine "grinder" significa in italiano molino ed è comunemente usato negli USA per designare i macina erba utilizzati per sminuzzare i prodotti a base di canapa come l'hashish o la marijuana. Questi attrezzi hanno fatto la loro prima apparizione in Germania negli anni '90. Il primo macina erba di mia conoscenza è un grinder in legno a due pezzi con piccoli chiodi incorporati del marchio Sweatleaf. I grinder sono realizzati nei materiali più diversi, come ad es. alluminio, acciaio inossidabile, acrilico, legno e steatite. Sono disponibili in tanti modelli differenti a due, quattro o più parti, a manovella, a funzionamento elettrico o con meccanismo a molla. Per recuperare il polline dalla marijuana i grinder a più parti sono muniti di un setaccio incorporato, alcuni addirittura con ampiezze di maglia diverse. La qualità del polline dipende dallo spessore delle maglie del setaccio: più fine è il setaccio, più concentrato il polline. I grinder si differenziano anche per la disposizione e per la forma dei dentini. A seconda del numero e della forma dei dentini il materiale viene tritato con maggiore o minore finezza. I grinder con i chiodi sono utilizzati per tritare la marijuana, mentre quelli con i dentini sono usati per sminuzzare sia hashish (duro, non oleoso) che marijuana.

È di grande importanza il materiale con cui vengono realizzati i grinder. Attualmente c'è un dibattito aperto sui possibili danni per la salute causati dalla presenza di particelle dovute ad abrasione. Certo è che un grinder in materiale duro produce meno abrasione rispetto a uno realizzato in materiale più morbido. I colori sono applicati con procedimento elettrolitico e rafforzano in misura ancora maggiore la durezza dell'alluminio. Dato che i colori possono essere dannosi per la salute esistono anche grinder colorati per anodizzazione soltanto all'esterno mentre l'interno ha invece il colore del materiale con cui è stato realizzato. A mio avviso è meglio optare per grinder in legno o in metallo con rivestimento duro (anodizzazione dura) o per quelli in acciaio inossidabile.

I grinder di nuova generazione a più parti sono dotati di griglie perforate intercambiabili situate sotto ai dentini attraverso le quali passa il materiale tritato. Questo consente di determinare con precisione il grado di sminuzzamento di cui si ha bisogno per le diverse esigenze, ad es. erba dal taglio più grossolano per gli spinelli, tritata più finemente per il vaporizzatore.

Anche l'hashish può essere sminuzzato nella maggior parte dei grinder con i dentini. A questo scopo deve essere possibilmente freddo e non troppo oleoso (grasso). Conservare preferibilmente in frigorifero. Chi arricchisce la propria miscela con tabacco può aggiungerlo direttamente nel grinder e macinare tutto insieme; ne risulterà una miscela più omogenea rispetto al metodo manuale e una combustione più uniforme.

Tutti i grinder che non sono stati realizzati in legno possono essere puliti semplicemente con detergenti a base di alcool oppure con detergenti specifici per grinder. Per eliminare i residui di materiale grattare o utilizzare una spazzola con setole dure. Per pulire i grinder in legno basta semplicemente grattare le parti che presentano impurità.

Grinder

Le terme de « grinder », broyeur en français, est communément utilisé aux États-Unis pour désigner les moulins à herbe servant à hacher des produits à base de chanvre, tels que le haschisch ou la marijuana. Ces appareils sont apparus pour la première fois en Allemagne dans les années 90. Le premier broyeur que j'ai eu entre les mains était un grinder en bois deux pièces avec dents intégrées de la marque Sweatleaf. Les grinders sont fabriqués dans les matériaux les plus divers, tels que par ex. : aluminium, acier inoxydable, bois et stéatite. Ils existent en plusieurs versions, à deux, quatre ou plusieurs parties, à fonctionnement électrique, à manivelle ou à ressort. Afin de récupérer le pollen de la marijuana, les grinders à plusieurs parties sont munis de tamis, dont certains avec différentes tailles de maille. La qualité du pollen dépend de la taille des mailles : Plus le tamis est fin, plus le pollen est concentré. Les broyeurs se différencient également par l'agencement et la forme des dents. La matière est hachée plus grossièrement ou plus finement en fonction du nombre et de la forme des dents. Les grinders à clous sont utilisés pour le hachage de la marijuana, ceux à dents pour le broyage du haschisch (dur, non huileux) et de la marijuana.

Le matériau de fabrication joue un rôle important dans le choix d'un grinder. Un vif débat s'est ouvert quant aux risques potentiels pour la santé de la présence de particules d'usure des grinders dans le mélange à fumer. Il est certain qu'un grinder en matériau dur produit moins d'usure qu'un grinder en matériau souple. Les couleurs sont appliquées par électrolyse et renforcent de surcroît la dureté de l'aluminium. Les couleurs pouvant nuire à la santé, il existe des grinders colorés par anodisation uniquement sur l'extérieur, l'intérieur étant laissé dans le ton du matériau. À mon avis, il est préférable d'opter pour des grinders en bois ou en métal à revêtement dur (anodisation dure) ainsi qu'en acier inoxydable.

Les grinders de la nouvelle génération sont dotés de grilles perforées interchangeables, placées sous les dents, et au travers desquelles passe la matière broyée. Cela permet de choisir le degré de broyage adéquat selon le but recherché, par ex. herbe grossièrement hachée pour rouler des joints ou finement moulue pour vaporisateur.

Le haschisch peut être broyé dans les plupart des moulins à dents. À cet effet, il doit être le plus froid possible et pas trop huileux (gras). À conserver de préférence au réfrigérateur. Au cas où le mélange à fumer serait additionné de tabac, mettre ce dernier également dans le grinder et broyer le tout. Le mélange obtenu est plus homogène que fait à la main et assure une combustion plus uniforme.

Tous les moulins, qui ne sont pas en bois, peuvent être facilement nettoyés avec des détergents à base d'alcool ou des détergents spéciaux pour grinders. Gratter ou utiliser une brosse à poils durs pour éliminer les résidus. Dans le cas des moulins en bois, il suffit de gratter les endroits concernés.

Grinder

Grinder, "Mahlwerk" en alemán, es en los EE.UU. una expresión para molinos de trituración de productos de cáñamo, como el hachís y la marihuana. Por primera vez aparecieron en los años 90 en Alemania. El primer grinder que conocí era el grinder de madera de dos piezas con pins de la marca Sweatleaf. Los grinders están hechos de diferentes materiales, como por ejemplo: de aluminio, acero inoxidable, acrílico, madera y piedra. Están disponibles en varios diseños, como de 2, 4 o más partes, con manivela, eléctricos o con equilibrador. Para la extracción adicional de polen algunos grinders tienen tamices integrados, algunos incluso con diferentes tamaños de malla. En diversos espesores de tamices pueden crear diferentes grados de polen: Cuanto más fino sea el tamiz, más potente será el polen. Los grinders también se distinguen por la colocación y forma de los dientes. Dependiendo del número y forma de los dientes, el material es más grueso o más fino. Grinders con pins son para moler la marihuana y grinders con dientes para moler hachís (duro, no aceitoso) y para el uso de marihuana.

Un punto importante en los grinders es el material del que están hechos. Existe un debate sobre si la abrasión del grinder es un peligro para la salud en la mezcla de fumar. Es cierto que un grinder hecho de material duro tiene menos abrasión que uno que fue hecho de un material blando. Los colores se aplican por electrólisis y endurecen el aluminio adicionalmente. Dado que los colores no son inofensivos para la salud, también existen grinders que solo tienen el color externo y que en el molino solo llevan el color del material. En mi opinión son preferibles los grinders de madera o metales con revestimiento curado (anodizado duro) y los de acero inoxidable.

En la última generación de grinders con múltiples partes también se puede reemplazar el disco de los dientes, a través del cual el material cae después de ser molido. Esto hace que sea posible determinar con precisión el grado correcto de trituración para los diferentes métodos de consumo, por ejemplo la hierba más gruesa para liar joints y la hierba más fina para vaporizar.

El hachís también se puede triturar bien con el grinder. Debería estar frío y no ser demasiado aceitoso (grasiento). Se debe almacenar en el refrigerador. El que enriquece su mezcla con tabaco, lo puede meter también en el grinder y mezclar todo junto en él. Esta mezcla es mejor que la que se mezcla a mano y quema mejor.

Todos los grinders que no son de madera se pueden limpiar con productos de limpieza a base de alcohol o limpiadores especiales para grinders. Los residuos incrustados pueden ser raspados o eliminados con cerdas duras de un cepillo. Los grinders de madera solo se deben raspar.

METALLMÜHLEN METAL GRINDER GRINDER IN METALLO GRINDER EN MÉTAL GRINDER DE METAL

Mühlen aus Metall, zwei-, drei-, vier- oder fünfteilig, sind nahezu unzerstörbar. Unsere Mühlen werden auf hochpräzisen CNC-Drehbänken mit geringer Toleranz gefertigt und drehen und drehen sich ... ein Leben lang.

Metal grinders, two-, three-, four- or five-part are almost indestructible. Our grinders are made on high-precision CNC-machines with low tolerance and they grind and grind and grind ... lifelong.

I grinder in metallo composti da due, tre, quattro o cinque parti sono praticamente indistruttibili. I nostri grinder sono prodotti su torni CNC di massima precisione e a minima tolleranza e ruotano, ruotano... per tutta la vita.

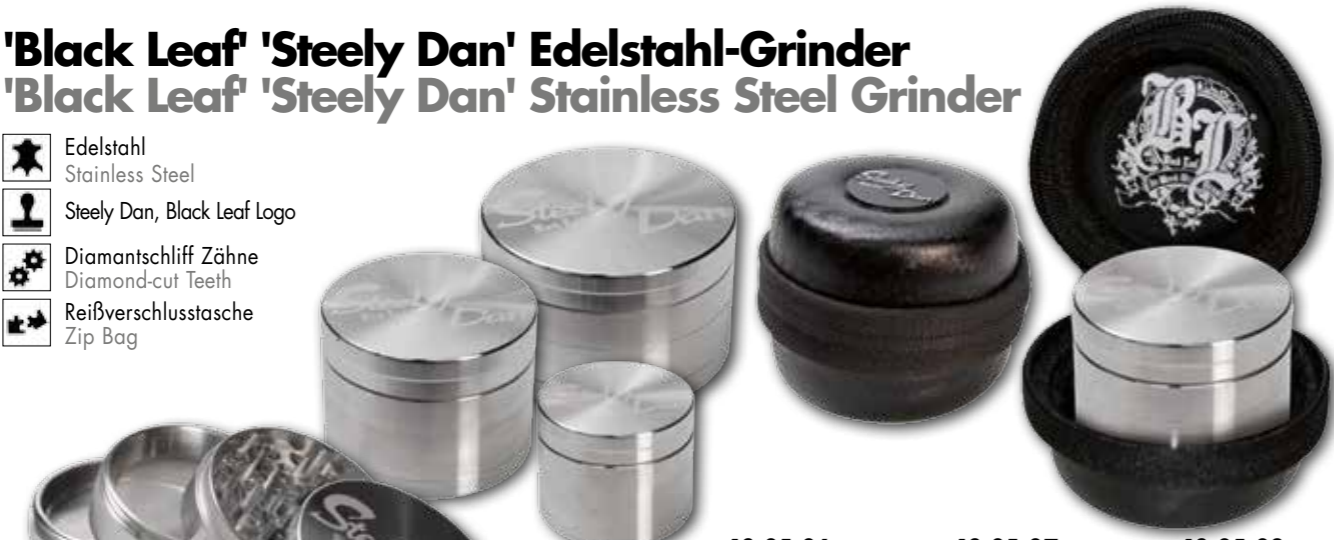

Les moulins en métal, en deux, trois, quatre ou cinq parties, sont pratiquement indestructibles. Nos moulins sont fabriqués sur des tours CNC de haute précision à faible tolérance et tournent, tournent... à vie.

Los grinders de metal, de dos, tres, cuatro o cinco piezas, son prácticamente indestructibles. Nuestros grinders se fabrican en tornos CNC de alta precisión, con baja tolerancia, y giran y giran ... toda una vida.

HOLZMÜHLEN WOODEN GRINDER GRINDER IN LEGNO GRINDER EN BOIS GRINDER DE MADERA

Mühlen aus Holz, aus nachwachsendem, abgelagertem, spannungs-
 freiem Holz. Sie sind von Hand geschnitzt und haben eine angenehme
 Haptik. Das verwendete Hartholz stammt meist aus Plantagenanbau.

Wooden Grinders, made of renewable, seasoned, tension-free
 wood are hand-carved and have pleasant haptics. The hard wood
 used comes mostly from plantation cultivation.

I grinder in legno sono realizzati in legno rinnovabile, stagionato e
 resistente alla tensione. Sono intagliati a mano e piacevoli al tatto.
 Il legno duro utilizzato proviene per la maggior parte da piantagioni.

Moulins en bois, en bois naturel sec et résistant à la tension. Ils sont
 sculptés à la main et agréables au toucher. Le bois dur utilisé provient
 généralement de plantations.

Los grinders de madera están hechos de una madera renovable,
 curada y sin tensión. Están tallados a mano y tienen un tacto agradable.
 La madera dura utilizada viene de plantaciones.

GRINDER MIT EIGENEM MOTIV?

**Kein Problem! Senden Sie
uns Ihr Logo, den Rest
machen wir!**

**Wir fertigen Ihnen Grinder mit Ihrem
Logo oder Ihrer Werbung ab 100Stk. pro
Logo an!**

Qualitäts Grinder aus bruchfestem Kunststoff,
3teilig, Ø60mm H 25mm, klar und ungefärbt,
mit Magnet und Vorratsfach, einzeln verpackt.

Ihr Logo oder Ihre Werbebotschaft werden im
Vorratsfach, unter dem Deckel, angebracht.

Wir benötigen dazu: Ihre Logo oder Ihre Vorlage
als PDF oder Adobe Illustrator Datei mit mindes-
tens 300dpi Auflösung. Der Durchmesser des
Logos oder der Werbung beträgt im Original
genau 50mm. Wir senden Ihnen vor Ausführung
des Auftrages ein Bild des Grinder zu, wie er
später aussehen wird.

Bitte senden Sie ihre Anfrage an:
grinder-promo@neardark.de

PROMO

PROMOTIONAL GRINDERS, WITH YOUR OWN LOGO OR MESSAGE?

**No problem! You supply
your logo or promotional
graphic, we do everything
else!**

**For a minimum order of 100pcs per
Logo, we will produce your own Acrylic
Promotional Grinders with your own
brand, logo or message!**

Quality 3 piece transparent grinders, made of
unbreakable plastic; Ø60mm, Height 25mm,
with magnetic fastener and stash compartment.
Each individually packed.

Your logo or promotion message will be 50mm
in diameter and will be fixed under the lid, in
the stash compartment.

We need: your logo or message as a PDF or
Adobe Illustrator file with minimum 300dpi
resolution. Before for-filling your order, we will
send you a draft picture by e-mail, of how your
grinder will look.

Please send your query to:
grinder-promo@neardark.de

MESSER UND ZUBEHÖR KNIVES AND ACCESSORIES COLTELLI E ACCESSORI COUTEAUX ET ACCESSOIRES CUCHILLOS Y ACCESORIOS

Messer und Bretter, das sind die traditionellen Geräte zur Zerkleinerung von Kraut und vor allem Harz. Für sehr große Mischungen sind sie den Grindern klar überlegen, zudem kann der Feinheitsgrad genauer bestimmt werden.

Knives and boards are the traditional tools for mincing herbs and especially resin. For major mixtures, they are clearly superior to grinders. Additionally, the degree of fineness can be defined more accurately.

Coltelli e taglieri sono gli utensili tradizionali usati per sminuzzare le erbe e soprattutto la resina. I grinder sono la soluzione ideale per grandi quantità di miscele, inoltre permettono di determinare con precisione la finezza di macinatura.

Couteaux et planches sont les outils traditionnels utilisés pour le hachage d'herbe et de résine, en particulier. Les grinders sont de loin la solution idéale pour de très gros mélanges, sans compter qu'ils permettent de déterminer plus précisément le degré de finesse.

Cuchillos y tablas, estos son los utensilios tradicionales para la trituración de hierba y, en especial, de resina. Para mezclas muy grandes, las tablas son claramente superiores a los grinders, y también el grado de finura se puede determinar con mayor precisión.
